

Leslie Fisher

Spotlight Sessions Speaker

Leslie Fisher's interest in technology began while studying music at the University of Southern California. She quickly realized the value of utilizing computers for music mixing and thus began a personal discovery process where technology replaced the flute and brought her nationally celebrated talents to us today.

After graduating from USC with a Business and Marketing degree in 1989, she went to an Apple Computer Inc. subsidiary where she was in charge of the education marketing and training program. Wanting more technical experience, Leslie left this company in 1992 and joined Apple Computer Inc. as a Senior Systems Engineer in K-12 education, providing technology solutions to school districts across Southern California.

When the Internet took off in 1994 and Leslie was one of the first Apple employees assigned to study Internet growth and implementation. Due to her knowledge of web design, server implementation and Internet Resources, she became the Internet resource in the Educational Western Region.

In 1997, Leslie was roadkill on Apple's road to recovery and as part of their massive lay off. Leslie planned to spend most of her huge severance package golfing and waiting a few months to look for a job. The day after her layoff, her phone began to ring with Apple customers requesting consulting. Before she could say fore, Fisher Technologies Inc. was created to help educators with their technology implementation and decisions.

Fisher Technologies Inc. is now a nationwide Corporation providing web design, consulting, training and presentation services to school districts and companies.
